

# Criticom ISEC 2330

## Secure desktop video solution

3eTI's Criticom ISEC 2330 integrated desktop video solution for IP (H.323) combines Ultra Electronics Criticom's DISA-approved, multi-domain secure video conference switching product (ISEC) with Cisco/Tandberg's industry-leading 1700 MXP desktop video conferencing system to meet your secure desktop video needs.

The Criticom ISEC 2330 provides all the benefits of Criticom's ISEC secure/non-secure switching technology, integrated with leading vendor Cisco/Tandberg's 1700 MXP video codec for the desktop. This all-in-one personal video conferencing system is the ideal solution for executive offices, and provides everything that is needed for secure IP conferencing in a compact form factor.

By automating the cross-domain switching process from secure to nonsecure networks, ISEC 2330 eliminates the need for expensive certified technicians and time-consuming manual processes. With Criticom's technology, end users are free to initiate on-demand video calls from their desktops – whenever, wherever.

With the flip of a single switch on the front panel, users can quickly establish a secure or non-secure video connection, guaranteeing IA compliance across conferencing networks. In addition, Criticom's illuminated sign clearly indicates the security status, providing users with complete assurance that their video communications are uncompromised.

3eTI's Criticom ISEC switching technology meets all TEMPEST, DISA, COMSEC, and IA requirements, and is also available in cart-based conference room solutions that support standalone H.323, H.320 and dual H.323/H.320 configurations.

### Technical highlights:

- DISA DVS approved and CAP compliant
- Two levels of secure switching
- Single front panel switch for security mode selection
- IPv4 and IPv6 support
- Cisco/Tandberg MXP 1700 codec integration
- Industry standard network interfaces
- Complete erase (clear and reset) of codec information between switching operation (period processing)
- Internal Web browser for network configuration
- Browser-based messaging for period processing status
- Security mode confirmation indicators
- Fail-safe error checking of hardware and software before switching networks
- DSAWG approved
- NIAP certified
- Optional: wall-mountable, illuminated "Secure/Non-Secure" sign and table-top switch

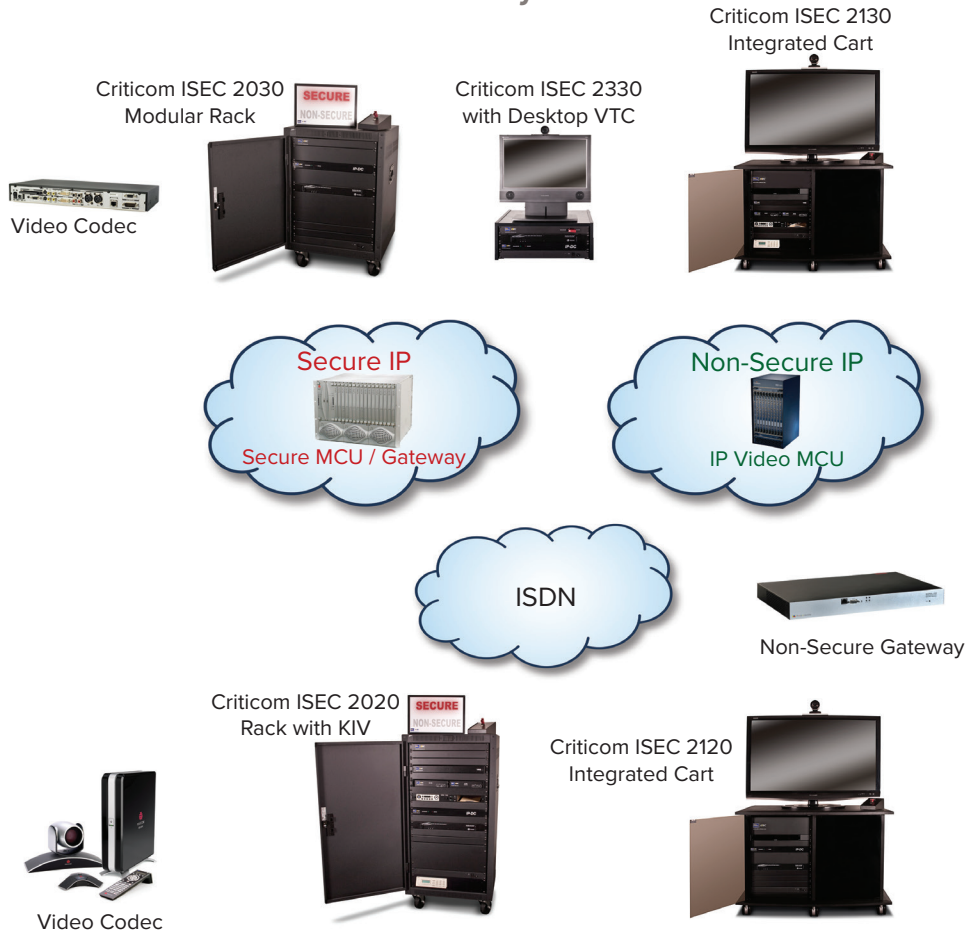

## FEATURES

- The leading DISA-approved secure video product
- Intuitive and fail-safe operation for end users with a single switch
- Automated switching process reduces the need for dedicated technical staff
- Easy procurement with preconfigured desktop video bundle
